## **Alexander Building Construction Co. completes New Support Services Building at the Penn State Milton S. Hershey Medical Center**

Harrisburg, PA, November 23, 2011 . . . Alexander Building Construction announced that it has completed the new Support Services Building at the Penn State Milton S. Hershey Medical Center. The new 37,000 square foot building will accept and distribute materials and supplies for the medical campus. The building provides space for materials management, environmental health, support services, office space, facility shops and a vehicle service area. The new building was constructed over and adjacent to an existing utility service tunnel. Extensive site work and road realignment were completed to redirect campus roads around the building, to provide truck access to the building and to more effectively manage traffic flow of patients and visitors to the medical campus without impacting deliveries and campus operations.

"Our team met each of the project's challenges, particularly the road relocations and constructing the new building over the utility tunnel, and met the Medical Center's occupancy schedule" said Rick Seitz, Alexander's president. "The new building, with its connection through the tunnel to most of the Medical Center buildings, will provide improved services and deliveries for the newly expanded campus."

The project is being submitting for LEED Certification by the United States Green Building Council.
