## **MOUNT NITTANY MEDICAL CENTER NEW LINEAR ACCELERATOR**

*Alexander Building Construction has completed project at  
Mount Nittany Medical Center*

STATE COLLEGE, PA (August 7, 2008) – Alexander Building Construction today announced the completion of a new Linear Accelerator Vault at Mount Nittany Medical Center in State College, PA.

The project included a 3,000 square foot addition to the existing Medical Center and interior renovations. The new addition was constructed to house a new linear accelerator to facilitate expanded treatment options, including image guided radiation therapy, for the medical center's Radiation/Oncology patients. More than 1,000 cubic yards of concrete were used to construct the addition's shell with wall thicknesses in excess of 7 feet thick and a 2 ½ feet thick concrete ceiling. All concrete work was self performed by Alexander Building Construction. Another unique feature was the provision to provide a 4 inch thick, lead lined door, which has a weight of approximately 4,000 pounds. In an effort to provide additional patient comfort, the new addition has wall mounted landscape scenes and ceiling mounted "skylight" lightboxes.

Renovation efforts include new office spaces, restrooms, and changing rooms. Additional wall protection and finishes were added to common areas.

**###**

**ABOUT ALEXANDER:** Alexander Building Construction LLC provides building contracting and construction management services for corporate, commercial and institutional clients building in central Pennsylvania. With a heritage of over 80 years, the company and its people bring a solid reputation for the delivery of reliable, cost-effective construction management services and for the ability to build the region's largest, most complex structures. The firm possesses significant project experience in the construction of corporate office buildings, hospitals, retail buildings, K-12 schools, colleges/universities, correctional facilities, and mid- and high-rise residential towers.
